***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 10 and 11, drawn to combined drug and electrical stimulation with superimposing of stimulation signals, classified in class 607, subclass 3.
- II. Claims 12-57, drawn to creating a non-excitatory electrical potential between two points in the vicinity of muscle, classified in class 607, subclass 9.
- III. Claims 58-66, drawn to modification of heart output or contraction with pacing and non-excitatory pulses, classified in class 607, subclass 9.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not useable together and have different functions, e.g. II and III do not require drug application, inventions I and II do not require pacing and inventions I and III do not require, for example, synchronization to heart activity.

Because these inventions are distinct for the reasons given above and the search required for Groups I and II is not required for Group III, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
